

CS194A

Android Programming Workshop

Lecture 2: April 15, 2020
Rahul Pandey

Outline

- Logistics
- Bigger Number Game
- Layouts

Outline

- **Logistics**
- Bigger Number Game
- Layouts

**Assn 1: Tip
Calculator**

**Assn 2:
Google Maps**

**Assn 3: Yelp
Clone**

Industry panel
discussion

Week #

Tip Calculator

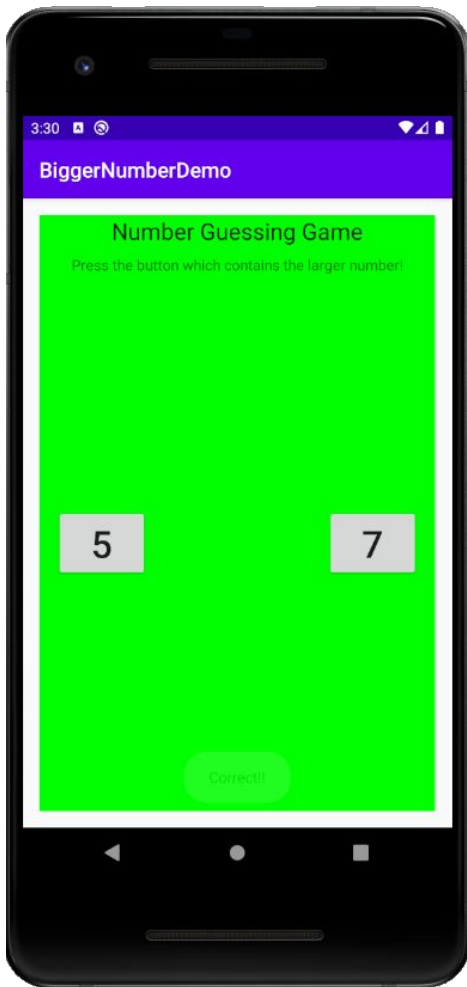

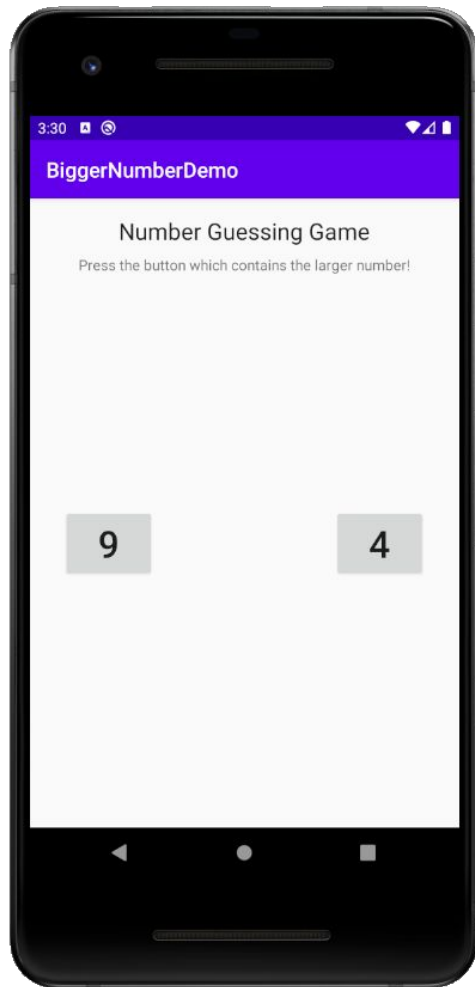

- [Canvas > Assignment](#)
 - Follow the README template to use [markdown](#)
 - I'll assign partners by next week
 - Due April 26

Git and Github session

- Monday, April 20 6-7pm
- Cover the basics to submit your project

Outline

- Logistics
- **Bigger Number Game**
- Layouts

Android Activity

- A “screen” in Android is called an Activity
- Activities are where we write our application logic:
 - handle user interaction
 - change what's on the screen
 - tell views to update

Bigger Number Game

- Building a layout
- Responding to user input
- Comparison logic
- Code cleanliness

Outline

- Logistics
- Bigger Number Game
- **Layouts**

Layouts

- Layouts are defined in XML
- Consist of various “views”
 - TextView
 - ImageView
 - Button
 - EditText
 - ...

Activity \longleftrightarrow Layout Communication

```
1 package edu.stanford.rkpandey.dummyproject
2
3 import ...
4
5
6
7 class MainActivity : AppCompatActivity() {
8
9     override fun onCreate(savedInstanceState: Bundle?) {
10         super.onCreate(savedInstanceState)
11         setContentView(R.layout.activity_main)
12
13         tvHelloWorld.text = "Updated text!"
14     }
15 }
16
```

```
1 <?xml version="1.0" encoding="utf-8"?>
2 <LinearLayout
3     xmlns:android="http://schemas.android.com/apk/res/android"
4     android:layout_width="match_parent"
5     android:layout_height="match_parent"
6     android:orientation="vertical">
7
8     <TextView
9         android:id="@+id/tvHelloWorld"
10        android:layout_width="wrap_content"
11        android:layout_height="wrap_content"
12        android:text="Hello World!" />
13
14 </LinearLayout>
```

Layouts (ViewGroups)

- ViewGroup: a special view that can contain other views (called **children**)
- Subclasses:
 - ConstraintLayout
 - LinearLayout
 - FrameLayout
 - RelativeLayout

XML

- Language used to describe hierarchical data (e.g. views inside a viewgroup)
 - `<element attr1="value" attr2="value"> ... </element>`
 - `<element attr1="value" attr3="value" />` (self-closing)
- Case sensitive!
- Let autocomplete help you

Padding inside, margin outside

Prefer design tab, but understand XML

Most professional devs will edit the XML directly

- Faster to specify attribute names instead of searching
- Company-specific abstractions = less value from design preview

ConstraintLayout

- The new default layout system, intended to create powerful and flat view hierarchies
- Views are laid out according to relationships (or **constraints**) between sibling views and the parent layout.

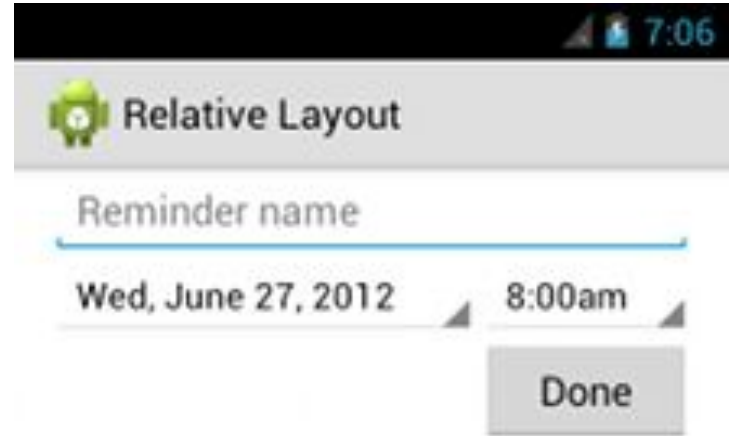

LinearLayout

Aligns all children in a single direction,
vertically or horizontally

RelativeLayout

Displays child views in relative positions

Flat hierarchies

Prep for next week

- Build the Tip Calculator
- If you're stuck for more than 30 minutes, post on Piazza or come to office hours
